

What's Mockuuups Studio?

It's a free desktop app for macOS and Windows that lets you easily create beautiful product mockups, marketing materials, even visual content for social media or blog posts. Simply drag and drop your product screenshot and Mockuuups Studio takes care of the rest.

Is it for me?

Our primary goal is to create an accessible, easy to use tool for work with various types of mockups. Now, you can create any type of visual content by placing screenshot into photorealistic scenes (without any design tool, either design skills). Few examples of use:

- App Previews
- Assets for advertising campaigns
- Social Media Content
- Press Kit assets
- Blog Posts

More about Mockuuups Team

For a lack of better available mockups, we've decided to take matters into our own hands. Back in 2014, we started [Mockuuups.com](https://mockuuups.com) by publishing one simple free package. After a few weeks, more than 8,000 subscribers and hundreds of requests for more content came flooding in. There was no way we were about to let go of this opportunity to do something good for design community. We've published hundreds of high-quality mockups for last 2 years, worked on couple of interesting side-projects such a [Bots UI Kit](#) or [Hollywood Mockuuups](#) and also prepared bunch of custom mockups for clients like LiveBeacon, Proto.io or Invision.
